

Introducing Eyewall Armor™ 6.8 Accordion Shutters

When it comes to protecting what matters most in your life – your family, your home and your business – you should demand the highest quality and most reliable protection you can find. When families and businesses look to protect their investments, they look to Town & Country Industries, the world's leading producer of hurricane shutters. With the introduction of Eyewall Armor™, Town & Country is proud to offer you a line of shutter designs that are convenient, easy-to-use and will provide years of secure, reliable protection against the roughest weather conditions, year-round.

All of our Eyewall Armor products have gone through rigorous research and development and testing to be the strongest and most durable hurricane products on the market. Eyewall Armor 6.8 and H.R. Accordions are available for virtually any testing requirements, including FBC HVHZ and ASTM standards, some of the most rigid in the nation. They both carry Florida Building Code HVHZ and non-HVHZ approvals. Various designs are also available with Texas

One of the biggest problems with most of the accordion shutters available on the market is corrosion. The construction of these shutters does not allow for lubrication of the stainless steel screws that hold the shutters in their tracks. Without lubrication, the screws corrode the aluminum shutter over time, compromising the shutter's strength, operation and performance. And, when protection is of the utmost importance, there's no room for compromise.

Eyewall Armor 6.8 Accordion Shutters have been designed so that corrosion isn't an option. The assembly screws can be easily lubricated, ensuring continuous and reliable operation and protection when you need it most.

In addition to like-new performance years after the sale, Eyewall Armor 6.8 Accordion Shutters offer the simplest and fastest locking procedure, with the only two-step process in the industry. No additional locking rods or devices are required. They are also the tightest stacking shutters on the market today and

If you need added protection for businesses or high-rise structures, the Eyewall Armor 6.8 and High-Rise Accordion Systems are made for you. The H.R. system shares the same features as our standard 6.8 Accordion System but is engineered specifically for high-rise, high-performance structures requiring much higher wind loads. The H.R. System is capable of spans up to 15' 6" in height, and tested to pressures beyond 300 psf, which translates to wind speeds well in excess of 300 mph, significantly beyond any code in the world today.
